

Screening for Exposure to Tick-borne Pathogens: The SNAP[®] 4Dx[®] Plus Test and the Veterinarian in One Health

Veterinarians can play a significant role in protecting people and pets from serious tick-borne illnesses. Screening the canine population for exposure to ticks and tick-borne pathogens alerts the veterinarian to the level of risk for disease development in pets and their owners. It also allows an opportunity to discuss how owners can reduce risk of exposure and potential for the development of clinical disease.

Presented by Rick Alleman, DVM, PhD, DABVP, DACVP

Dr. Alleman received his DVM from Louisiana State University and practiced companion-animal medicine and surgery for 9 years in private small-animal practice in New Orleans. He then completed a clinical pathology residency at the University of Florida and completed his PhD degree in molecular biology of vector-borne diseases. He is currently CEO of Lighthouse Veterinary Consultants.
